

Representative vectors were computed using 200 plot-generating programs. The metric is cosine similarity in all experiments. Note that diffs are self-normalized when plotted, so colors in diff images are only illustrative.

## 1 Transformation clustering experiment

In this experiment we cluster the representative vectors of random transforms. We clustered 100 randomly sampled transforms with the AffinityPropagation algorithm with parameters `{'damping': 0.5, 'max_iter': 200, 'convergence_iter': 15}` and formed 13 clusters.

### 1.1 Cluster 0

Transforms in this cluster:

- `marker = 5`
- `marker = 8`
- `markedgedwidth = 2.996632178446022`
- `markedgedwidth = 3.4217932682402927`
- `markedgedwidth = 3.5979417597447654`
- `marker = 10`
- `markedgedwidth = 3.5501975826397154`
- `marker = 5`
